

DCIT 208 IA2 INDIVIDUAL ASSIGNMENT

SOFTWARE ENGINEERING

SUBMISSION PACKAGE

Course code: DCIT 208

Assignment number: DCIT208 IA2

Assignment title: Client Interview Evidence and Requirement Transformation
Memo

Full name: Hammond Kotey Amon

Student ID: 22303916

Team name: Luxybyness

Project Title: Modern Saloon and Management System

Team Repository URL: <https://github.com/John-owusu-ansah/DCIT-208-Group-29>

Individual portfolio repository URL: [Dept-of-Comp-Sci-University-of-Ghana/dcit208-individual-engineering-evidence-portfolio-2026-HammondAmon](https://github.com/Dept-of-Comp-Sci-University-of-Ghana/dcit208-individual-engineering-evidence-portfolio-2026-HammondAmon): [seg26-dcit208-individual-engineering-evidence-portfolio-2026-dcit208-2026-individual-evidence-templa](https://github.com/seg26-dcit208-individual-engineering-evidence-portfolio-2026-dcit208-2026-individual-evidence-templa) created by GitHub Classroom

Date: Friday 3 July 2026

AI disclosure statement: I used AI assistance. I used Google Gemini and Chat GPT in giving me points and explaining some keywords. Verification steps are documented. I understand that I must be able to explain and defend every part of this submission.

DISCOVERY QUESTIONS

Current Workflow

- 1.Can a client book an appointment without creating an account?
- 2.Does the system have a reminder to remind workers of their clients' booking information?
- 3.How much time from the appointment date can a client cancel an appointment?

Pain Points

- 1.How is the system able to notify the client when the preferred stylist is not available due to emergency on the appointment date?
- 2.How often do clients cancel appointments at the last hour?

Data

- 1.How long should a client's information be saved on the system after appointment before it is deleted?
- 2.What client info is usually collected (name, address, telephone number, email)?
- 3.Will the client be able to have the same service without specifying again?

Success Criteria

- 1.Is the system able to process 100 bookings at a go?
- 2.Is the client able to successfully book an appointment without contacting the front desk?

Security and Privacy

- 1.Is the client's personal information safe?

Failure or Exception Handling

- 1.What is the system's response to a client's data loss?

INTERVIEW OR OBSERVATION EVIDENCE

My team and I, given the QA/Validation lead role held a meeting with the client via WhatsApp.

Questions which were asked were discussed and jotted down as a team. One team member went ahead to contact the client and begin interrogation. The interview was held on the 2nd July,2026, at 10 o'clock pm.

What's the cancellation policy — how many hours before, and is there a fee?

Clients should cancel at least 24 hours before their appointment. Deposits are non-refundable if the cancellation is made less than 24 hours before the appointment.

10:04 PM

Can a client reschedule, or only cancel and rebook?

10:04 PM ✓✓

You

Can a client reschedule, or only cancel and rebook?

Clients should be able to reschedule their appointments through the website, depending on availability.

10:07 PM

Is payment required to book (deposit), or paid in person after service?

10:08 PM ✓✓

How far in advance must or can a client in advance book ?

9:56 PM ✓✓

You

How far in advance must or can a client in advance book ?

Clients can book appointments up to 1–2 weeks in advance. However we also accept same day bookings, provided there are available time slots. This gives clients flexibility while helping us manage our appointment schedule efficiently.

10:01 PM

What's the cancellation policy — how many hours before, and is there a fee?

10:02 PM ✓✓

Ms Vanessa please I would love to ask you a few questions aiding in the process

Okay go ahead please

9:45 PM

Can clients book without creating an account, or must they register first?

9:45 PM ✓✓

You

Can clients book without creating an account, or must they register first?

Okay, clients should be able to book as guests without creating an account. However, they can create an account if they want to view their bookings or book faster in the future.

9:55 PM

REQUIREMENT TRANSFORMATION

Client statement: *"Clients should be able to reschedule their appointments through the website, depending on availability"*

Functional Requirement: The system shall allow the client to change his/her appointment date to another date to suite the client's comfort.

Non- Functional Requirement: The system shall be able to allow the client to see the available time slots and allow the client to choose another available time slot for rescheduling.

User Story: *As a client, I want to be able to reschedule my appointment. During the process, I want to be able to see the available time slots*

Acceptance Criteria

- 1.The client can access the **Reschedule Appointment** option for an existing booking.
- 2.The system displays only available appointment dates and time slots.
3. The system prevents the client from selecting an unavailable or already booked time slot.
4. When the client confirms the new appointment, the original booking is updated with the new date and time.

API/interface implication

The website may provide an API endpoint such as:

PUT /appointments/{appointmentId}/reschedule

The API should:

- Verify the appointment exists.
- Check that the requested time slot is available.
- Update the appointment if the slot is available.
- Return a success or error response.

Data Implication

The system should be able to store the client ID, appointment ID, original and new appointment date and time.

Test Idea

Test case: In attempting to reschedule an appointment, I will first log in as a client and then book an appointment. I will later go ahead and try to reschedule by choosing another available time slot.

Result: I should be able to successfully see and select an available time slot.

Open Question

How many booking reschedules should be allowed in a specific time frame? Should the system allow rescheduling three times in a day?

REFLECTION

After reading the answers to our questions by the client, I was able to understand some few things. The client in my suggestion wants her customers to book an appointment before getting to her shop most at times. The client is always expecting to see the bookings of her various customers. These booking information will help her to prepare ahead of time. By so doing, she will be able to structure her working days very well. I can also see after the interview we had with the client that she also would limit the number of customers she would be able to attend to during the day, given the number of workers she has. The client also expects her customers to make an initial deposit before they can access the booking feature. This will let her know the customers who really intend to book an appointment. This will allow her to avoid any unserious person. Hence, saving time slots. She is also willing to refund money to her customers if their complaints meet her conditions.

From the interview, I can also say that our client does not want to host anybody who has not booked an appointment on her website first before coming to her shop

Assumption before the interview

I assumed that her shop would be able to host people who have not booked an appointment. An example is someone who just saw the shop while he/she was driving and decided to give it a try. I also assumed that no payment would be made until the service was provided.
